Wall Hung Vanity Installation Instructions

- Latitude wall hung vanities are constructed with a secondary top fastening strip on the inside of the cabinet.
- All fastening strips are doweled into the cabinet sides.
- Even with this additional structural integrity, Latitude **STRONGLY RECOMMENDS** additional support under the cabinet. This could be a framed ledge, or a ledger strip, or a matching panel.
- 3-1/2" length minimum. Screws must be used in top and bottom fastening strips and connect with wood wall framing. Additional frame blocking within the wall is strongly suggested.
- Screws should include a washer to better distribute the holding power and keep from pulling through the fastening strip material.
- Adjacent cabinets should be fastened together at all 4 corners to help distribute the weight load.
- Additionally, on sink bases, the solid top should not be removed, and a perimeter of 2" or more must remain intact.
- Following these recommendations will insure a secure installation.

* Wood drawer box depth will be 18"
Steel drawer box depth will be 17-3/4"
